HOW TO USE
1. Cleanse the lesion with abundant saline according to sterile procedure.
2. Dab dry with sterile gauze.
3. Apply the medication on the lesion area and set as per standard protocol.

Please, read the instructions and warnings for use carefully before using the device.

AVAILABLE SIZES
NPT-2010 S Pack of 1 piece 20 x 10 cm
NPT-2010 Pack of 5 pieces 20 x 10 cm

Class IIb medical device. Dressing in the form of single-use planar support, completely coated on one side with an oleic matrix-based gel releasing Reactive Oxygen Species (ROS).

MECHANISM OF ACTION

1. Novox®-Patch has a film-forming action, opposing the contamination of lesions / wounds by pathogens.
2. Novox®-Patch facilitates the healing of surgical scars / chronic skin lesions, by promoting the activation of skin microcirculation.
3. Novox®-Patch has a soothing effect.
4. Novox®-Patch contributes to the stimulation of the granulation tissue and the re-epithelialization of acute and chronic lesions.

TECHNOLOGY

Novox®-Patch is based on a technological process studied and perfected by the R&D team of MOSS, which has maximized the enrichment of oxygen as part of an oleic matrix, so as to lend the medical device its technical features of constant, continuous release of ROS.

INDICATIONS

- Post-surgical wounds
- Traumatic ulcers
- Pressure ulcers
- Chronic ulcers
- Hypertrophic scars
- Superficial burns

ADVANTAGES

- Free from active pharmaceutical ingredients (APIs) and preservatives
- Does not induce antibiotic resistance
- Simplified application and removal
- Flexible, soft and delicate on the skin
- Able to absorb small blood secretions and limited exudate quantities
- Easy to be cut out to reduce its size, by either using special sterile tools or first thoroughly disinfecting the tools used, given the necessary care not to damage the support or the internal and external lining fabrics
- Particularly indicated in the case of patients with hypersensitivity to the adhesives of patches
- Allows to inspect the wound bed, without changing the medication
- Affords atraumatic removal
